# MP RECONSTRUCTION SYSTEM

25+ YEARS OF CLINICAL HERITAGE

---

INTRAOPERATIVE FLEXIBILITY FROM  
MONOBLOCK TO MODULAR

---

- 
- The image displays three hip joint models against a white background with a blue diagonal gradient at the bottom. Each model shows a different configuration of the MP Reconstruction System. The left model is a monoblock design with a long, dark grey femoral stem. The middle model is a modular design with a shorter stem and a separate acetabular cup. The right model is another modular design with a different stem configuration. The acetabular cups are pink and the femoral heads are silver.
- Shortest construct Monoblock is equal to 165mm measured from the center of rotation
  - Reliable Modular Prosthesis designed for use when proximal bone support is compromised
  - 3 decades with no reported fractures at the modular junction
  - Intuitive tray configurations improve work flow and reduce sterilization costs
